# PAPERLESS ASSESSMENT & ANALYTICS

# SMART WAY TO MAP STUDENT'S PERFORMANCE WITH PROGRAM OUTCOME

We offer an award winning solution for skill-based training & assessment in education vertical. It encompasses a software suite & a writing tablet providing not only a virtual pen & paper experience to students but also ensure eliminating colossal challenges associated with paper based examination process. The paperless system makes the whole experience safer & operationally exceptional. With analytics on formative & summative assessments, it not only enables improved decision making by focusing on patterns that indicate student success but also help institutions to strategize assessment methodology & map student's performance results with program outcome.

PATENT AWARDED  
BY

Does your institution face LOGISTICAL NIGHTMARE during collection of evidence and report on STUDENT PERFORMANCE?

Does your institution need TECHNOLOGICAL TRANSFORMATION to keep pace with industry 4.0 requirements?

Does your institution need a TOOL to enhance EFFICIENCY in your assessment approach, practices & efforts?

Is your current assessment methodology UNIQUE to your institution's CULTURE & ACADEMIC objectives?

Does your institution support 'GREEN EARTH' initiatives?

Does your institution acknowledge the impact of 'PAPER ECONOMY'?

What is the 'WATER FOOT PRINT' of an A4 size paper ?

# PAPER BASED EXAMINATION CHALLENGES

-  Data Security / Leakage threat
-  Malpractices / Impersonation
-  Evaluation Errors
-  No Data Analytics
-  Environmental Eco-Threat
-  Unproductive cycle time
-  Logistical Nightmare

Education systems have evolved over the centuries in response to social, economic and technological innovations, which in turn are impacted by the evolution in education system itself. Changing social paradigms and environment have transformed students' motivation and career expectations, emphasizing the need for comprehensive education ecosystems.

The Technology is in the driving seat to transform the learning process by utilizing analytics to develop adaptive learning paths.

The traditional means of assessment at the end of a program are passé. Real time adaptive assessment methods are providing students a learning path specific to their needs – unlike the traditional post facto assessment methods where the scores at the end of the program tested the reception of knowledge. The advent of online analytics is allowing course developers and teachers to identify the best learning path based on the real time assessment of the learner behaviour. Such analytics allows them to design programs that further strengthen the individual learning paths of students with different levels of academic intellect and learning motivations.

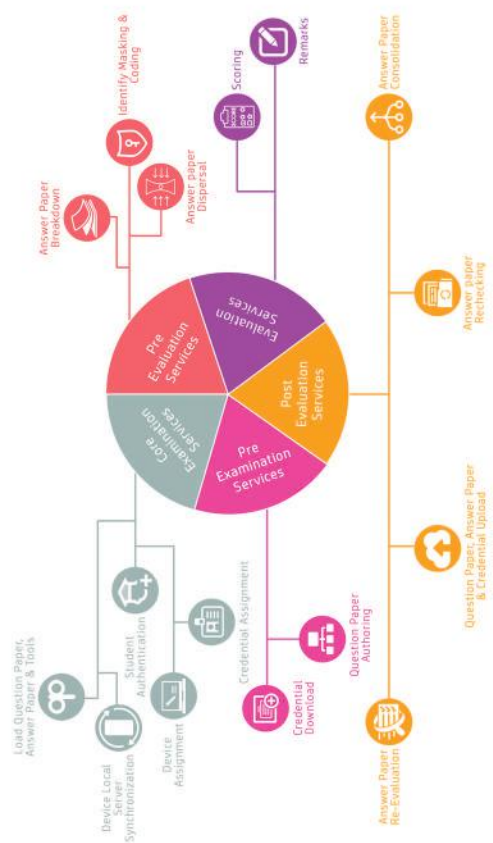

Paperless Assessment & Analytics (PAA) is a turnkey solution for conducting simultaneous paperless examination across multiple geographically dispersed locations in a secure environment. With this solution, we endeavour to address the core problem of conducting assessment examinations for academic and industry recruitment by making the whole processes of examination management go paperless i.e. making it completely digital.

The system manages and distributes question papers electronically to the examination centres / students' tablet electronically over a secure communication channel. The integrity of question papers is managed by using strong encryption algorithms.

Enable students to take their OBJECTIVE & SUBJECTIVE examinations on tablets.

100% TRUE paperless, giving virtually digital paper experience with stylus pen.
